

Paul COHEN

MECHANICAL DESIGN ENGINEER

PROFILE

I am a hard-working and highly motivated mechanical design engineer, with key strengths in CAD modelling, circular design practices, technical project management and machine design. I pride myself in working best in collaborative team environments by building strong relationships with colleagues, clients and suppliers, while drawing on my academic and technical experience to deliver creative solutions.

CONTACT DETAILS

Available on request.

SKILLS, LANGUAGES AND COMPETENCIES

- Solidworks, Inventor, Creo
- Python, C++, Matlab, Excel VBA
- ANSYS, ABAQUS
- French (B1), Spanish (A2)
- Technical project management
- Design for manufacturing/ assembly: injection moulding, sheetmetal fabrication, machining, vacuum forming.
- Design for circularity

OTHER INTERESTS

I am a keen cyclist, rock climber and bike polo player. I enjoy tinkering with bicycles, reading, spending time in museums, and exploring the great outdoors.

REFERENCES

Available on request.

EXPERIENCE

SENIOR MECHANICAL ENGINEER

Jan 2020–Apr 2026

Ensera Design, formerly Kinneir Dufort (Bristol)

Ensera Design is a user-centred design and product development consultancy. I worked on a variety of medical, consumer and industrial projects in multi-disciplinary project teams, while also founding and heading up the internal Sustainability Lab initiative to promote sustainable and circular design processes. Responsibilities and achievements include:

- Technical or Mechanical Lead on projects ranging from complex electromechanical diagnostic systems and accessibility aids, to early development of high-volume medical devices - details in portfolio.
- Producing and reviewing CAD and engineering drawings for injection moulding, machining, sheetmetal fabrication, vacuum forming and additive manufacture.
- Writing and reviewing project proposals, costing projects and managing project teams of up to 10 people.
- Co-founded the Sustainability Lab in 2021, leading the business development, employee and client training, authoring of marketing materials, and project delivery.
- Joined as a junior engineer before quickly progressing through the levels in recognition of my achievements and competence.

MECHANICAL ENGINEERING INTERN

Nov 2017–Nov 2018

Alloy Product Development (San Francisco)

Alloy is a product design consultancy based in San Francisco, California. I worked with clients ranging from mature startups to Fortune 50 companies. I specialised in mechanism design and tightly packaged consumer electronics, working at all stages of the product development process. Responsibilities and achievements included:

- Owning the transfer to manufacture for a EV charging subsystem, managing design changes and validation testing.
- Participation in brainstorming for early stage 'blue sky' concept generation as well as targeted problem solving.
- Performing tolerance analyses to support EVT-style build of a tightly-packaged electronics product prototype.
- An initial 3-month contract was extended twice, to the maximum 1 year allowed by the visa.

EDUCATION

M.ENG. MECHANICAL ENGINEERING

2013–2017

*University of Cambridge, **Distinction***

Covered a general engineering syllabus for the first two years, before specialising in mechanical design in the final year. Achieved a 1st class grade in all years.

CAMBRIDGE-MIT EXCHANGE

2015–2016

*Massachusetts Institute of Technology, **GPA 4.9/5.0***

Specialised in mechanical product design and manufacturing, including precision machine design, finite element analysis, electromechanical system design, and design for manufacturing.

ADDITIONAL EDUCATION

LIFECYCLE ASSESSMENT COURSE (4 DAYS) UCL

2023

Introductory course covering practicalities of setting up LCA models, as well as critical evaluation of their application.

"FROM LINEAR TO CIRCULAR" *Ellen MacArthur Foundation*

2020

A 12 week part-time course in an international cohort, learning circular design principles from experts and applying them to real-world problems.
